The Lights at Ebbets Field

The seven steel towers, each 120 feet above the ground, were designed and fabricated by the Blaw-Knox Co.

The electrical system was engineered and designed by the General Electric Co.

The intensity of illumination is uniform all over the playing area with a minimum intensity at all points of 100 foot candles.

There are 650 glass-enclosed reflectors, each housing 1500-watt light globes. The total wattage is 1,072,500.

The cost of installation was $117,000.

The lighting intensity at second base is ten times that secured from a reading lamp.

Two miles of pipe and fifteen miles of cable are used to supply the necessary current.

The light given off, if properly distributed, would illuminate 9,000 city blocks or a highway for 447 miles.

The seven night games of 1938 drew 193,000 people.
